[Preface & Introduction](#) | [Bibliography](#)

Preface

This bibliography includes works selected from USDA's National Agricultural Library (NAL) collection on applied veterinary science. To cover the topic of the beginnings of veterinary science, one has to explore those works that were published centuries ago as humans tried to deal with the health and care of the animals that were so important to their lives. As with many of the roots of Western Civilization, the early documents are by Greek and Roman authors. (In this document they are presented in English translations.) Veterinary-type animal care literature in Western civilization continued to be published through the early Medieval and Renaissance periods in Europe and the eighteenth and nineteenth centuries in the United States and other countries. Today veterinary literature represents the advanced science-based research that is on a par with human-based medical science.

It is anticipated that the information contained in this document will be a resource for those interested in the history, derivation, and development of the veterinary profession via the holdings on the topic at NAL.

Although most of the publications mentioned in this document are in NAL's general collection and available for library loan, some volumes are considered too rare and valuable and therefore do not circulate. All entries in this document include the NAL call number. Non-circulating rare volumes are identified with an uppercase R at the end of the call number and are housed in the NAL Special Collections section.

For information on the inter-library borrowing policies and procedures, please refer to <http://www.nal.usda.gov/borrow-materials>.

Introduction

Humans have had long and varied interactions with many of the wild animals in their environment. They have always found animals interesting; awe inspiring; amusing; companions; a messenger to and from the gods. Animal-based products are used as food, useful implements, clothing, writing media, etc. In addition, humans have often been able to utilize some species of animals for transport of people, goods, and equipment, for peaceful purposes and military campaigns, etc. Images of animals have been scratched on rocks, drawn on cave walls, sculpted from local materials, used to illustrate human characteristics, as religious symbols, etc. For instance, most cultures have imagined animal shapes in the constellations of stars, and as spirits that are either positive or negative in human activities or religions. For example, ancient Egyptians bowed to the bull, venerated the cat and held other animals in high regard. Christians used the symbol of the lamb and the shepherd caring for the flock representing Christ leading the believers.

Whether subjects of art and worship or images of agriculture, or through jokes or cartoons, animal figures depict aspects of a culture and illustrate the creator's values. Human relationships with animals have been and still are complex, instructive, and paradoxical.

Some interesting uses of animals in literature can be found in writings such as Aesop who composed many of his tales using animals to illustrate human qualities, actions and characteristics. In the Medieval period the *"Physiologues"* gave mystic meaning to 50 legends of animals and natural objects. Animal similes were used in the fifteenth and sixteenth centuries to illustrate the everyday experiences of life. Even Shakespeare alluded to animals—over 4000 of them. In the eighteenth and nineteenth centuries, the romantic literature of that time intended to free men physically and spiritually. The animal that they felt epitomized this new freedom was the bird.

Through all these periods of time, humans tried to understand illness in their own bodies, and often recognized that many of these same illnesses seemed to attack their animals as well. The Chinese used herbal medicine and other treatments to attempt to cure themselves and their favorite/most valuable animals.

What follows is a brief historical review of some of the major authors who wrote about illness in animals. We get a glimpse of how the expertise and scientific approach to treating animals developed from the Greek and Roman days to the twentieth century.

The Beginnings

In historical information in China, there are records dating to 4000-3000 B.C. that record the use of herbs for curative purposes for humans and animals. Egyptian hieroglyphics from around 3500 B.C. show the presence of numerous types of domesticated animals. But, the evidence for the development of a body of information directly dealing with animal healing in Western thought is implicated to have begun in Mesopotamia in about 300 B.C. The first individual to be considered a veterinarian is Urlagaldinna. The Greek Scientist, Alcmaeon (c. 500 B.C.) was the first person known to have dissected animals for scientific purposes. In India there are records that animal hospitals were established in India during the Brahman era and the reign of King Ashoka (273-232 B.C.).

During the Greco-Roman period there were a number of individuals who recorded the current knowledge regarding animal care and disease. Aristotle (384-322 B.C.) recorded much of the knowledge regarding animals. He recognized that animals were different and yet some showed similar characteristics to humans. He proposed a classification system of animal species that served as the basis for the development of a systematic classification we call taxonomy. Much of Aristotle's writing forms the beginning of Western recorded natural science. Animals that were important at that time included oxen and asses used to power agricultural activities, and sheep and goats raised for food and fiber purposes and probably horses.

Virgil, in works such as "*Georgica*," immortalized some of the epidemics of human and animal diseases that occurred frequently on Roman farms and cities. But, it is Cato (234-149 B.C.) and another writer Varro (116-27 B.C.), who were both influenced by Greek scholars, that produced many works about contagious diseases. Tragically, most of these works seem to have been destroyed and copies no longer exist.

Columella, a respected Roman scholar and writer of the first Century A.D., was a very prolific writer on the topic of animal care and breeding. He recorded and used the term "veterinarius" for a person who is a caretaker of pigs, sheep and cattle. (It is interesting to note that the word *veterina* was the Roman word for "pack animals". In Rome the term "souvetaurarii" was another word that was used for someone who took care of animals.) Between 42-68 A.D., Columella wrote 12 volumes of animal-related publications on topics such as animal breeding, husbandry, and health in livestock. His works include descriptions of disease, and medication formulae that were used up into the Middle Ages. Even though Columella wrote rather extensively on breeding and husbandry, there was little progress in the understanding or effective treatment of internal diseases and health problems of both humans and their animals.

For this early veterinary related history, an excellent bibliographic list can be found on the World Association for the History of Veterinary Medicine's website at: (<http://www.wahvm.umn.edu/Resources.html>).

Europeans Post-Middle Ages

During the Middle Ages, there are many references to animal plagues and their devastating effects on farmers' productivity. Some of plagues were recorded by individuals like Francois Rabelais, who recorded the first full description of sheep pox in 1494. During the sixteenth and seventeenth centuries, there were major advances in understanding human and animal diseases due to inventions such as the microscope and the development of a scientific method of inquiry into things unknown. For example, during a plague in European cattle in 1711, Giovanni Mario Lancisi first diagnosed Rinderpest as a contagious viral cattle disease. A year later, Bernardino Ramazzini vaccinated cattle against cattle plague. However, the approach to animal diseases was mostly from the human medicine viewpoint. It was not until 1762 that the first veterinary school in the world was established by Claude Bourgelat in Lyons, France. It is interesting to note that soon after the establishment of a French veterinary college, others were established in the 1770's in Sweden, Germany (Hanover), Denmark, and Austria (Vienna). In 1844, the Royal College of Veterinary Surgeons (RCVS) was founded in Great Britain. The first veterinary college in the United States was not established until 1879.

Some of the great advancements made in the 1700's were the result of John Hunter, a Scotsman who lived and worked through most of the century (1728-1793). He left an important legacy not only by his research and writing, but through those he trained as well. Up until this time, the "veterinary type profession" consisted of mostly self-declared practitioners, farriers, blacksmiths, herdsmen, and local granny-witch doctors who were mostly illiterate. The educated horse masters, country squires and intellectually curious gentlemen often quoted the ancient masters. There was also the ethic that animals are put on this earth to serve mankind and that they were unable to feel pain as humans did. These ideas often fostered a sense of callousness and cruelty in people who were around animals. The more disgusting and harsh the treatment of disease the more effective people thought they would be. In many ways, the level of treatment for human diseases was not much different.

However, in the 1700's there appeared a new type of veterinary practitioner known as the surgeon-farrier. Individuals like John Hunter were part of this emerging group. This was a dramatic change in they type of individuals who were interested in treating animals. These men were often a physician, surgeon or apothecary who for various reasons turned to treating animals. For the first time, there was an active practitioner who could write about his research, experience, and treatment activities. Most of the early literature focused on the horse—obviously one of the most important animals in the

culture and often the most valuable. John Hunter was of this genre.

At an early age, Hunter became an assistant to his brother William, a renowned physician, anatomist and medical educator. John became an avid anatomist and took to surgery and dissection and research with enthusiasm. After working with and learning from his brother for 12 years, he served as a surgeon in the army. He then learned dentistry through association with the Spence family. For 30 years, until his death in 1793, Hunter examined everything from hearing in fish to dentistry. He contributed more written work on domestic animal husbandry and veterinary science than anyone had published in the previous 125 years. Originally most of the papers were published in the *Philosophical Transactions of the Royal Society*, but were republished in 1792 in a compiled work "*Observation on the Animal Oeconomy*."

Animal Care in the New World (United States)

European species of domestic animals were brought to the West Indies on boats beginning with Christopher Columbus's second voyage in 1493. These animals multiplied well and served as the foundation stock for the Spanish colonies in Mexico.

In 1520 European cattle were introduced in Florida by Ponce de Leon, but animals did not arrive in the Virginia colonies until 1611. By 1627, their numbers in the Virginia colonies had grown to 5,000 in spite of the Indian's killing many of them in 1622. There were few horses in these introductions, as they required more care than the cattle and were not as useful for the hard work that oxen were needed to perform. There appears to have been some transfer of animal treatments from England, as there are references to "an expert cow doctor" practicing in Virginia as early as 1625. What sorts of treatments were being used is really not known. It is probably safe to say, that they were probably what was being used in England at the time.

At the same time that the larger livestock numbers were increasing in Virginia, there were introductions of only small animals in New England. It is known that there were dogs on the ship *Mayflower*, and possibly goats and chickens but no cattle or horses. The larger livestock animals were not brought into the northern colonies until 1620.

Since many of the wealthy country households were quite self-sustaining, they had interests in the health and welfare of their livestock. George Washington does not mention any professional attention given to his stock at Mount Vernon, but he does mention that he sought treatment for various animals during his extensive travels. Washington did take an interest in breeding and developed a draft mule called the "big jack". He also had sheep grazing on his Mount Vernon estate in Virginia.

Thomas Jefferson also was a gentlemen farmer who when he was in Charlottesville showed much interest in his livestock as well as all useful plants. He seems to have primarily been interested in sheep health. One disease problem that plagued him was sheep scab. Much of his correspondence is related to this disease in his flocks. It does seem that livestock became scrawnier, smaller and less productive than the original stock of animals imported from Europe.

The Nineteenth Century

In the 1800's, the microscope revealed the world of microbes. A scientific method for research began to be developed for a rational approach to identifying the larger disease organisms and an understanding of the disease process. By the mid 1800's technology was in place to support effective efforts to understand and treat disease in humans and animals. European ideas and literature were transferred by individuals and imported into the United States during the Colonial period via scholarly journals, and onsite visits by Americans as they traveled in Europe. Some of the more literate and interested gentlemen farmers attempted to apply new products, knowledge and methods.

A British surgeon—turned veterinarian, George Dadd was an early advocate of rational animal health practices in America. He is considered the author of the first two classics in American veterinary literature—*"The Modern Horse Doctor"* (Boston 1854) and *"The American Cattle Doctor"* (1851). His recommendations and teachings were largely ignored by the barely-organized veterinary profession. A quote from *"The American Cattle Doctor"* states veterinary science was "a matter for reproach. . . The farmers have must begun to see the absurdity of bleeding an animal to death with a view to saving its life; or pouring down their throats destructive agents with a view of making one disease cure another."

Late in the eighteenth century, reprints of some works of English veterinary writers and translations of German and French veterinary works appeared in American editions. The use of the Latin derived term veterinarian was introduced in the English writings of Sir Thomas Browne of Great Britain (c1802). It was not until much later that the term gained general usage for those who treated animals and their diseases and injuries. Before that they were called "farriers" or a "cow leech" and other similar names.

In 1844, the Royal College of Veterinary Surgeons (RCVS) was founded by a Royal Charter in the United Kingdom as a governing body of the veterinary profession to ensure that educational and ethical standards required by law were maintained. The college required five years of study—two years of basic veterinary sciences to understand healthy animals, anatomy, physiology, etc. and three years of clinical and clinical-related courses, skill of examinations, diagnosis, etc.

The founding date of the American Veterinary Medical Association was 1863. The U.S. Livestock Sanitary Association (now the U.S. Animal Health Association) was established in 1897. Other livestock and poultry organizations followed. The first United States veterinary school was not established until 1879. At that time, Iowa State University developed a program of graduate study in the field.

About 20 years after the establishment of the U.S. Department of Agriculture by Abraham Lincoln, the fledging Department's administrators soon realized that there needed to be more support for scientific based programs to address issues of animal care and production. They were supported in these concerns by the farmers and ranchers who were having problems selling their animals and animal products abroad. So, in 1884, the Bureau of Animal Industry (BAI*) was created by Congress within USDA in response to petitions from farmers and ranchers.

Twentieth Century

In the twentieth century, progress in veterinary medicine continued to advance. Gradually, educational institutions and associations were founded and evolved to communicate the advances to the veterinary community. Harvard University in Cambridge, Massachusetts and Johns Hopkins University in Baltimore, Maryland were among the first. In the United States, the USDA Animal and Plant Health Inspection Service (APHIS) began to employ veterinary officers. Their duties were to undertake duties that included control and eradication of major epidemic farm animal diseases, the control of imported and exported animals and animal products, the operation of animal health laboratories and treatment of the animals within them, and other animal welfare matters. Veterinary scientists could undertake basic or clinical research in natural science laboratories within the USDA, with veterinary schools of universities and other governmental and industrial research institutions, and the military. There are veterinary inspectors that deal with licensing and license regulations, and veterinary field service officers who deal with consumer protection involving meat hygiene, and communicable diseases between animals and humans.

After World War I, we began to see a lessening of utilitarian uses of the horse, and the beginning of automated agriculture. Many veterinarians then began to turn toward the care of dogs and cats as a means of survival. Until this time, small animal medicine had been a minor part of veterinary medicine. Norman Rockwell depicted this by several illustrations that did not even include veterinarians. On March 10, 1923, a memorable illustration appeared on the cover of *"The Saturday*

Evening Post" titled "Puppy Love" in which a young boy in the country wearing tattered clothes was pouring medicine from a patent medicine bottle intended for a sick dog wrapped in blankets nearby.

During the next thirty years, the veterinary profession in the United States blossomed and gradually became an equal member of the medical community. There were efforts on the part of several professional associations to show the public the professional status that veterinarians had achieved.

In the 1940's, 50's, and 60's, the American Veterinary Medical Association, the American Animal Hospital Association, the Associated Serum Producers, Inc. and others were in the midst of various public relations campaigns that stressed how a veterinarian must appear as a professional. Two of Norman Rockwell's illustrations from this time period demonstrate these ideas and indicate the favorable public opinion held at that time of the veterinary profession. The first famous Rockwell illustration of an animal receiving medical attention is entitled "Waiting for the Vet." It is a painting that appeared on the March 29, 1952 cover of "The Saturday Evening Post". It is a delightful picture of a boy, Jimmy, sitting in a waiting room and holding in his arms a sick dog whose head was in a makeshift bandage. The waiting room was filled with four other dogs and their owners. Peeping through a door on the right is a veterinarian attending a patient. This time the veterinarian is an older man wearing a long white lab coat and stethoscope. "Waiting for the Vet" marked a return to regular subjects for Rockwell, including children, dogs and doctors, but with new settings and new props--the veterinarian's office instead of a patent medicine bottle--and all that it implies. In 1961, another Rockwell illustration, this one commissioned by the Upjohn Company, showed a young male veterinarian examining a small dog on the examination table in a small animal clinic. The illustration, simply titled "The Veterinarian," was used for the cover of the 1963 American Veterinary Medical Association's annual convention booklet. In the print, a boy looks on anxiously as the veterinarian completes his examination. The veterinarian is wearing a white medical smock and a stethoscope, and there is a Doctor of Veterinary Medicine Diploma from Cornell University in the background. This scene sends a message of utmost professionalism. No longer is the boy relying on his own knowledge and wit, a doctor is now being consulted. All these details lend credence to the occupation and conduct of the veterinarian.

In 1947 in the United States, the Association for Women Veterinarians (AWV) was founded by Mary Knight Dunlap (1910-1992). At that time, the U.S. had about 120 women veterinarians, mainly in and around New York City and in East Lansing, Michigan. The number of women graduating with veterinary degrees rose from 200 in 1963 to 3,213 in 1980, reaching 18,088 in 1995. This change in the position of women veterinarians in the U.S. over the past 50 years is the subject of a book "Our History of Women in Veterinary Medicine: Gumption, Grace, Grit, and Good Humor." The book was compiled and edited by Phyllis Hickney Larsen, DVM, Chair of the AWV History Committee, in honor of the AWV's 50th anniversary in 1997. It includes chapters written by women veterinarians working in a wide variety of positions all over the United States. You can find more information about this organization at the following web site.

<http://www.awv-women-veterinarians.org/index.cfm>

In 1964, German veterinarians and others interested in veterinary history were invited to a symposium on the history of veterinary medicine in Hanover, Germany, sponsored by the German Veterinary Medical Association (DVG) and the German Institute (Fachgebiet) for the History of Veterinary Medicine, established in 1963 within the Veterinary College, Hanover. As a result of this meeting, in 1969, the World Association for the History of Veterinary Medicine (WAHVM) was founded.

According to their web site, <http://www.wahvm.umn.edu/Objectives.html> the objectives of the WAHVM are:

- to bring together people with an interest in the history of veterinary medicine
- to encourage research in the field of veterinary history
- to promote and coordinate such research and education
- to exchange and disseminate information on the history of veterinary medicine throughout the

world by providing a common forum for National Societies for the History of Veterinary Medicine and all other interested individuals and organizations. See the **WAHVM Veterinary History Database** at http://www.vetline.nl/freetext.asp?url=freetext.asp&ftmod=freetext_000000169

The WAHVM received observer status of the World Veterinary Association in 1970 and became an associate member in 1976. The main activity of the WAHVM is the organization of an annual international congress. Today there are approximately 24 veterinary history societies throughout the world. Following are the addresses of the veterinary history societies in the United States and the United Kingdom:

Veterinary History Society	American Veterinary History Society
Attn.: Mr. R.D. Bone, BVMS-MRSVS	Attn.: Secretary Dr. L. Lemonds

Solihull, West Midlands B91-IAA	Hastings, Nebraska 68901
United Kingdom	United States

Science, psychology and art have re-established animal symbols in the twentieth century. Man's ambivalent relationship with animals over the centuries has raised and continues to raise many intriguing issues. Many of man's issues and values may be reflected in the titles contained in this bibliography of selected titles are held by the National Agricultural Library. There was no attempt to be all-inclusive in this publication. These items were selected to give a sense of the development and need for knowledge in veterinary medicine, and are only a sampling of the many publications on this subject in the Library's collection.

NAL Call Number: R 41 D71

Descriptors: veterinary medicine, diseases, domestic animals, farriery, Virginia, Maryland, United States, rare book, Special Collections

Notes: A copious selection from the best treatises on farriery in the United States, to which is added a number of receipts.

Anonymous (1931). ***Parasites & Parasitisms of Domestic Animals; Selected Articles From Veterinary Medicine, 1930-31.*** Veterinary Magazine Corporation: Chicago, Illinois, 80 p.

NAL Call Number: 41 V643

Descriptors: veterinary medicine, parasites, domestic animals, illustrations

Anthony, D. (1984). *Man and Animals: Living, Working, and Changing Together*. University Museum, University of Pennsylvania: Philadelphia, Pennsylvania, 80 p.

NAL Call Number: SF114.U5P4

Descriptors: veterinary medicine history, University of Pennsylvania, domestic animals, exhibitions, bibliography, illustrations, some color illustrations, animal welfare

Notes: Published in celebration of the 100th anniversary, the School of Veterinary Medicine, University of Pennsylvania.

Arburua, J.M. (1966). *Narrative of the Veterinary Profession in California*. [publisher unknown]: San Francisco, California, 366 p.

NAL Call Number: SF624.C2A7

Descriptors: veterinary medicine, veterinary history, narrative, illustrations, bibliographies

Archer, A.H. (1895). *Practical Veterinary Advice for Stockowners*. 2nd edition, [publisher unknown]: London, England, 78 p..

NAL Call Number: 41 Ar22

Descriptors: veterinary medicine, stockowners, advice

Aristotle (1938). *Aristotle's Politics - Translated by Benjamin Jowett with an Introduction, Analysis and Index by H.W.C. Davis*. The Clarendon Press: Oxford, United Kingdom, 355 p.

NAL Call Number: 280 Ar4

Descriptors: veterinary medicine history, Aristotle, political science, Benjamin Jowett, H.W.C. Davis, index

Aristotle (1943). *Generation of Animals, with Translation by A.L. Peck*. Harvard University Press and W. Heinemann Ltd.: Cambridge, Massachusetts and London, England, 607 p.

NAL Call Number: 442 Ar4

Descriptors: Aristotle, veterinary medicine history, zoology, pre-Linnaean works, Arthur Leslie Peck, diagrams, bibliography, translations, reproduction, illustrations

Notes: Greek and English on opposite pages. Loeb Classical Library

Aristotle (1908-1952). *The Works of Aristotle, Translated into English Under the Editorship of W.D. Ross*. Clarendon Press: Oxford, England, 12 volumes.

NAL Call Number: 411 Ar4

Descriptors: Aristotle, philosophy, William David Ross, John Alexander Smith, Bekker, illustrations, veterinary medicine history

Notes: Volumes. 4-5 and 8, those first published, edited by J.A. Smith and W.D. Ross. The volumes and paging correspond to the Oxford edition of Bekker's Greek text. Other authors/editors: William David Ross 1877- and John Alexander Smith 1863-1939.

Armatage, G. (1877). *Every Man His Own Horse Doctor*. F. Warner and Co.: London, England, 830 p.

NAL Call Number: 41 Ar52E

Descriptors: veterinary medicine, recipes, illustrations, plates, some colored plates, color fronticepiece, anatomical illustrations, surgical illustrations, steel plates

Notes: In which is embodied *Blaine's Veterinary Art and Illustrations*.

Armatage, G. (1889). *Every Man His Own Horse Doctor*. Judd: New York, New York, 830 p.

NAL Call Number: 41 Ar52E 1889

Descriptors: veterinary medicine, recipes, illustrations, plates, color illustrations, anatomical illustrations, surgical illustrations

Notes: In which is embodied *Blaine's Veterinary Art and Illustrations*.

Armatage, G. (1869). *The Thermometer as an Aid to Diagnosis in Veterinary Medicine*. Nry

Kimpton: London, England, 46 p.

NAL Call Number: 41 Ar5

Descriptors: veterinary medicine, veterinary medicine history, veterinary medicine diagnosis, body temperature measurement

Arnold, J.P. and H.C.H. Kernkamp (1994). ***One Hundred Years of Progress: the History of Veterinary Medicine in Minnesota***. Minnesota Veterinary Historical Museum: St Paul, Minnesota, 260 p.

NAL Call Number: SF624.M6A76 1994

Descriptors: veterinary medicine, veterinary medicine history, veterinary medicine in Minnesota, illustrations, portraits, index

Notes: Edited by Thomas H. Boyd.

Association for Women Veterinarians and P.H. Larsen (1997). ***Our History of Women in Veterinary Medicine: Gumption, Grace, Grit, and Good Humor***. Association for Women Veterinarians: Littleton, Colorado, 115 p.

NAL Call Number: SF612.O87 1997

Descriptors: veterinary medicine, veterinary medicine history, Association for Women Veterinarians, women veterinarians, United States, biography, bibliography, illustrations

Notes: Compiled and edited by Phyllis Hickney Larsen. Other title: *Women in Veterinary Medicine*.

Association of Experiment Station Veterinarians (1898). ***Proceedings of the Second Annual Meeting of the Association of Experiment Station Veterinarians, Omaha, Nebraska***. *United States Dept. of Agriculture, Bureau of Animal Industry Bulletin*. U.S. Dept of Agriculture, Bureau of Animal Industry: Washington, DC, 29 p.

NAL Call Number: 1 An5B no. 22

Descriptors: veterinary medicine, veterinary medicine history, veterinary medicine societies, USDA Bureau of Animal Industry, veterinarians

Awkerman, L.C. (1978). ***The History of Veterinary Medicine in Lancaster County (PA)***.

Awkerman: Manheim, Pennsylvania, 80 p.

NAL Call Number: SF624.P4A95

Descriptors: veterinary medicine, veterinary medicine history, veterinary medicine Pennsylvania, veterinary medicine Lancaster County history, illustrations

Bartlet, J. (1770). ***The Gentleman's Farriery: or, a Practical Treatise on the Diseases of Horses: Wherein the Best Writers on the Subject have been Consulted, and M. La Fosse's Method of Trepanning Glandereel Horses is Particularly Considered and Improved: Also a New Method of Nicking Horses is Recommended; with a Copper-Plate and Description of the Machine***. 7th edition, revised, J. Nourse: London, England, 370 p.

NAL Call Number: SF951.B3 1770 R

Descriptors: veterinary medicine, veterinary history, farriery, horse diseases, M. La Fosse, glandereel horses, nicking horses, early writers, veterinary medicine early works to 1800, index, color plates, illustrations, John Bartlet 1716?-1772

Bierer, B.W. (1939). ***History of Animal Plagues of North America, with an Occasional Reference to Other Diseases and Diseased Conditions***. [publisher unknown]: Baltimore, Md, 97 p.

NAL Call Number: 41 B474H

Descriptors: disease from 1656-1939, chronological disease accounts, animal diseases, threatened livestock, factual incidences

Notes: Issued in 5 pts. Extensive bibliography at end of each part.

Bierer, B.W. (1955). ***A Short History of Veterinary Medicine in America***. Michigan State University Press: East Lansing, Michigan, 113 p.

NAL Call Number: 41 B474S

Descriptors: veterinary medicine United States, veterinary history

Billings, F.S. (1890). *Evidence Showing that the Report of the Board of Inquiry Concerning Swine Disease was Fixed, and an Address on Original Research in Nebraska*. University of Nebraska, Agricultural Experiment Station of Nebraska: Lincoln, Nebraska, 18 p.
NAL Call Number: 41 B49R
Descriptors: veterinary medicine, veterinary medicine history, animal diseases, swine disease, Nebraska, F.S. Billings 1845-1912, evidence

Billings, F.S. (1890). *Inoculation for Swine Plague*. [publisher unknown]: 14 p.
NAL Call Number: 41 B49I
Descriptors: veterinary medicine, veterinary medicine history, inoculation, swine plague, Nebraska, Frank Seaver Billings 1845-1912

Billings, F.S. (1893). *Original Investigations in Cattle Diseases in Nebraska: Southern Cattle Plague*. Agricultural Experiment Station of Nebraska Bulletin No. 28. *Animal Disease Series* no. 5. University of Nebraska, Agricultural Experiment Station of Nebraska: Lincoln, Nebraska, 116 p.
NAL Call Number: 100 N27 (4) no. 28
Descriptors: veterinary medicine, veterinary medicine history, cattle diseases, babesiosis in cattle, Texas fever, southern cattle plague, illustrations, colored illustrations, plates, animal diseases, Nebraska, Frank Seaver Billings, 1845-1912
Notes: Caption title: *Etiology of Southern Cattle Plague-Texas fever*. "Revised and augmented with many new investigations, and the true place of the tick as a vehicle of infection unquestionably demonstrated" other cover.

Billings, F.S. (1884). *The Relation of Animal Diseases to Public Health, and Their Prevention*. D. Appleton and Company: New York, New York, 446 p.

Bradley, O.C. (1923). *History of the Edinburgh Veterinary College*. 4th edition, Oliver and Boyd: Edinburgh and London, England, 101 p.

NAL Call Number: 41.9 B72 Ed.4

Descriptors: veterinary medicine, veterinary history, veterinary education, Edinburgh Veterinary College, Great Britain, Orlando Charnock Bradley 1871-1937

Bradley, R. (1725). *A Survey of the Ancient Husbandry and Gardening: Collected from Cato, Varro, Columella, Virgil and Others the Most Eminent Writers Among the Greeks and Romans: Wherein Many of the Most Difficult Passages in those Authors are Explain'd, and the Whole Render'd Familiar to Our Climate; with Variety of New Experiments. Adorn'd with Cuts. with a Preface, Shewing the Use of Husbandry, and the Necessity of Erecting Publick Gardens*. B. Otte: London, England, 373 p.

NAL Call Number: 30.8 B72 R

Descriptors: veterinary medicine, veterinary medicine history, ancient history, ancient husbandry, Greek husbandry, Roman husbandry, animal husbandry, plant husbandry, experiments, illustrations, agriculture early works to 1800, Marcus Porcius Cato, Lucius Junius Moderatus Columella, Marcus Terentius, Boetius Varro, Bradley Richard 1688-1732

Notes: Other authors: Marcus Porcius Cato 234-149 B.C., Lucius Junius Moderatus Columella, Marcus Terentius, Boetius Varro.

Brown, Sir G.T. (1895). *Animals of the Farm in Health and Disease*. 3rd edition, J. Murray: London, England, 72 p.

NAL Call Number: 41 B81A

Descriptors: veterinary medicine, diseases, illustrations

Browne, P.A. (1837). *An Essay on the Veterinary Art; Setting Forth Its Great Usefulness, Giving an Account of the Veterinary Colleges in France and England, and Exhibiting the Facility and Utility of Instituting Similar Schools in the United States. To Which is Added, a Few Hints Upon the Propriety of Connecting Therewith an Insurance Upon the Lives of Horses*. Thompson: Philadelphia, Pennsylvania, 22 p.

NAL Call Number: 41 B812

Descriptors: veterinary medicine, veterinary art, veterinary history, Peter Arrell Browne 1782-1860

Brumley, O.V. (1943). ***A Text-Book of the Diseases of the Small Domestic Animals***. 4th edition, Lea & Febiger: Philadelphia, Pennsylvania, 422 p.

NAL Call Number: 41 B836T Ed.4

Descriptors: veterinary medicine, diseases, small animals, domestic animals, illustrations, engravings

Notes: 4th ed., thoroughly revised. Illustrated with 37 engravings.

Burns, P.W. (1976). ***Veterinary Medicine at Texas A & M University 1958-1975***. State Institute: 97 p.

NAL Call Number: SF624.T4B9

Descriptors: veterinary medicine, veterinary medicine history, Burns, Patton W., Texas, Texas A & M University, illustrations, bibliography

Notes: A bibliography. "A supplement to *Eighty Years of Veterinary Medicine at the Agricultural and Mechanical College of Texas 1878-1958* by Hubert Schmidt." (NAL Call Number: 41.9 Sch5)

Butts, L. (1953). ***Cooper Curtice, "Dr. Ticks", American Agricultural Scientist, 1856-1939: and Notes Relative to "Texas Fever"***. [publisher unknown]: Fairfax, Virginia, 1 volume.

NAL Call Number: 120 C943

Descriptors: veterinary medicine, veterinary medicine history, Cooper Curtice, Texas fever, Dr. Ticks, Butts, Lee, biography

Cadiot, P.J. (1897). ***Exercises in Equine Surgery by P.J. Cadiot, Translated by A.W. Bitting***. W.R. Jenkins: New York, New York, 122 p.

NAL Call Number: 41 C112E

Descriptors: veterinary medicine, veterinary history, veterinary surgery, horses diseases, illustrations, Pierre Juste Cadiot 1858-1934

Cadiot, P.J. (1901). ***Studies in Clinical Veterinary Medicine and Surgery by P.J. Cadiot. Translated, Edited, and Supplemented with 49 New Articles and 34 Illustrations by A.W. Dollar***. W.R. Jenkins Co.: New York, New York, 619 p.

NAL Call Number: 41 C112S

Descriptors: veterinary medicine, veterinary surgery, translation, illustrations, charts

California Legislature Joint Committee on Agriculture and Livestock Problems (1952). ***Special Report of the Joint Legislative Committee on Agriculture and Livestock Problems on: Part 1. Vesicular Exanthema of Swine. Part 2. Foot-and-Mouth Disease in Canada. Part 3. Federal Animal Research Laboratory, Plum Island, New York***. Senate of the State of California: Sacramento, California, 67 p.

NAL Call Number: 41 C124Sp

Descriptors: veterinary medicine, veterinary medicine history, U.S. Plum Island Animal Disease Center, vesicular exanthema of swine, foot-and-mouth disease Canada

California State Board of Examiners in Veterinary Medicine (1916). ***Official Register of Licensed Veterinarians of California***. [publisher unknown]: Sacramento, California, 17 p.

NAL Call Number: 41.9 C123

Descriptors: veterinarians, licensed to practice

Cato, M.P. (1934). ***Marcus Porcius Cato, on Agriculture; Marcus Terentius Varro on Agriculture***. The Loeb Classical Library. [Latin Authors], Harvard University Press and W. Heinemann, Ltd: Cambridge, Massachusetts and London, England, 542 p.

NAL Call Number: 30.8 C290

Descriptors: veterinary medicine, veterinary medicine history, ancient history, ancient

veterinary history, Latin authors, ancient authors, bibliography, agriculture early works to 1800, Marcus Terentius Varro, Marcus Porcius Cato, William Davis Hooper, Harrison Boyd Ash, Greek authors, Roman authors, ancient husbandry, animal husbandry, Greek husbandry, Roman husbandry

Notes: Ancient Latin authors. Latin and English on opposite pages. Bibliography provided. English translation by William Davis Hooper 1869-later revised by Harrison Boyd Ash. Marcus Porcius Cato 234-149 BC.

Clater, F. (1878). *Every Man His Own Cattle Doctor; A Practical Treatise on the Diseases of Horned Cattle*. [publisher unknown]: London, England, 380 p.

NAL Call Number: 41 C57

Descriptors: veterinary medicine, cattle, diseases, horned cattle, domestic animals

Notes: 10th edition was done by Edward Mayhew in 1878.

Clater, F. (1825). *Every Man His Own Cattle Doctor; Containing the Causes, Symptoms, and Treatment of All Diseases Incident to Oxen, Cows, and Sheep with Numerous Additions and Corrections Including a Short Treatise on the Anatomy and Physiology of Neat Cattle*. Baldwin, Cradock, and Joy: London, England, 347 p.

NAL Call Number: 41 C57 Ed.6

Descriptors: veterinary medicine, cattle, diseases, neat cattle, oxen, cows, sheep, anatomy, physiology, Francis Clater 1736-1823

Notes: 6th ed., with numerous additions and corrections, by his sons, Samuel and John Clater.

Clater, F. (1844). *Every Man His Own Cattle Doctor: Containing the Causes, Symptoms, and Treatment of All the Diseases Incident to Oxen, Sheep, and Swine; and a Sketch of the Anatomy and Physiology of Neat Cattle by Francis Clater. Edited, Revised, and Almost Completely Rewritten by William Youatt... with Numerous Additions, Embracing an Essay on the Use of Oxen, and the Improvement in the Breed of Sheep, etc. by J. S. Skinner... with Numerous Cuts and Illustrations*. Lea and Blanchard: Philadelphia, Pennsylvania, 251 p.

NAL Call Number: 41 C57 R

Descriptors: veterinary medicine, animal diseases, oxen, cattle, neat cattle, sheep, swine, anatomy, physiology, illustrations, veterinary medicine history, domestic animals United States

Notes: Other authors: John Stuart Skinner, 1788-1851 and William Youatt, 1776-1847.

Clater, F. (1815). *Every Man His Own Cattle Doctor, or a Practical Treatise on the Diseases of Horned Cattle: Being a Concise and Familiar Description of All the Diseases Incident to Oxen, Cows and Sheep; with the Most Simple and Effectual Method During the Lambing Season*. A. Small: Philadelphia, Pennsylvania, 256 p.

NAL Call Number: SF961.C63 1815 R

Descriptors: veterinary medicine, cattle, horned cattle, diseases, color plates

Notes: Entirely rewritten by George Armitage.

Clement, A.W. (1891). *Veterinary Post-Mortem Examinations*. Sabiston & Murray: New York, New York, 64 p.

NAL Call Number: 41 C592

Descriptors: veterinary medicine, veterinary autopsy, illustrations

Cobb, N.A. (1898). *Report on the Parasites of Stock*. New South Wales Dept. of Agriculture Misc. Pub. no. 215, New South Wales Dept of Agriculture: Sydney, New South Wales, Australia, 62 p.

NAL Call Number: 23 N47M

Descriptors: veterinary medicine, parasites, livestock

Cole, S.W. (1850). *The American Veterinarian, or Diseases of Domestic Animals*. Jewett:

Boston, Massachusetts, 288 p.

NAL Call Number: 41 C67 1850

Descriptors: veterinary medicine, animal diseases, domestic animals, United States

Notes: Samuel W. Cole 1796-1851.

Cole, S.W. (1865). *The American Veterinarian or Diseases of Domestic Animals*. Orange Judd: New York, New York, 288 p.

NAL Call Number: 41 C67 1865

Descriptors: veterinary medicine, diseases, domestic animals

Columella, L.J.M. (1745). *L. Junius Moderatus Columella of Husbandry: In Twelve Books: and His Book Concerning Trees*. Printed for A. Millar: London, England, 600 p.

NAL Call Number: 30.8 C72H R

Descriptors: veterinary medicine, veterinary medicine history, Roman husbandry, ancient Latin writer, English translation, Pliny, Cato, Varro, Palladius, agriculture early works to 1800, Special Collections

Notes: Translated into English, with several illustrations from Pliny, Cato, Varro, Palladius, and other ancient and modern authors.

Columella, L.J.M. (1941-1955). *On Agriculture With a Recension of the Text and an English Translation by Harrison Boyd Ash*. Loeb Classical Library. [Latin Authors]. Harvard University Press and W. Heinemann Ltd: Cambridge, Massachusetts and London, England, 3 volumes.

NAL Call Number: 30.8 C72Ag

Descriptors: veterinary medicine, veterinary medicine history, ancient Latin writers, Lucius Junius Moderatus Columella, Roman husbandry, Great Britain, bibliography, English translation, English and Latin, agriculture early works to 1800

Notes: English translation by Harrison Boyd Ash. Printed in Great Britain. Latin and English on opposite pages.

Connecticut General Assembly Joint Standing Committee on Agriculture (1860). *Report of Testimony Heard by the Joint Standing Committee on Agriculture of the Connecticut Legislature, Relative to the Disease of Cattle Now Prevalent in Massachusetts*.

Carrington Hotchkiss, State Printers: New Haven, Massachusetts, 24 p.

NAL Call Number: 41 C766

Descriptors: veterinary medicine history, George H. Dadd, Amasa Walker, Daniel Lindley, animal disease, contagious pleuropneumonia, Massachusetts

Notes: Contents include testimony of Hon. Amasa Walker, testimony of Dr. George H. Dadd and testimony of Rev. Daniel Lindley concerning contagious bovine pleuropneumonia in Massachusetts.

Connecticut Veterinary Medical Association (1916). *Revised List of Veterinarians Licensed to Practise Veterinary Medicine, Surgery and Dentistry in the State of Connecticut*.

[publisher unknown]: Hartford, Connecticut, 14 p.

NAL Call Number: 41 C765

Descriptors: veterinary medicine, veterinary surgery, veterinary dentistry, Connecticut

Cotchin, E. and V. Carter (1990). *The Royal Veterinary College, London: A Bicentenary History*. Barracuda Books: Buckingham, England, 232 p.
